

EKSOY ZDHC LIST - LEVEL 3 PRODUCTS

Sustainable Chemical

www.eksoy.com

INTRODUCTION

Eksoy started production of textile auxiliaries in 1981. Today, as an international company, we continue to produce with a larger capacity in our new factory in Adana Industrial Zone by using sustainable processes to protect our planet. Our R&D Center, which has a significant part of our investments, has been operating to contribute a sustainable future for our customers. We are among the top 5 companies in our region in the Technology and Innovation Funding Programs Directorate's R&D incentives list. As a result of the capability of our R&D center, we produce many imported raw materials in our own factory to improve product safety and preventing the use of hazardous chemicals in our supply chain. We are proud of being one of the pioneer companies in the sector by specializing in textile chemicals and dyes for 39 years.

Eksoy became a participant of ZDHC in 2019 and registered all the products to the ZDHC Gateway. The list of existing products will be updated again as a result of the emergence of new products. The product groups we produce in our own production facility; silicone oils, cationic softeners, nonionic softeners, finishing agents compatible with different yarn types, bleaching agents, enzymes, dispersing agents, stabilizers, levelling agents, formaldehyde-free fixators compatible with different types of dyes, alkaline and acid buffers compatible with different fabric types and dyes, washing agents, reactive dyes, disperse dyes, optical brighteners compatible with cotton and polyester. Eksoy can offer chemicals and dyes within the limits in ZDHC MRSI for the use of customers.

EKSOY

Sustainability

EKSOY has produced many of its raw materials in recent years, contributes to environmental protection with much less packaging and producing concentrated products for sustainability.
